Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An anti-dazzling film, comprising:

a transparent substrate film; and

an anti-dazzling layer provided on one side of the transparent substrate film;

wherein:

~~said~~ the anti-dazzling layer ~~comprising~~ comprises an ionizing radiation-curable resin and transparent fine particles~~,~~; and

~~said~~ the transparent fine particles ~~satisfying~~ satisfy ~~requirements represented by~~ formulae (I) and (II):

$$2.0\ \mu m \leq d50\% \leq 5.0\ \mu m \quad (I)$$

$$0.5\ \mu m \leq (d84\% - d16\%)/2 \leq 1.2\ \mu m \quad (II)$$

where: ~~wherein~~

d84% represents a particle diameter corresponding to a point of 84% in a cumulative curve of ~~a~~ particle size distribution of the transparent fine particles, assuming that the total weight of the transparent fine particles is 100%;

d50% represents a particle diameter corresponding to a point of 50% in ~~said~~ the cumulative curve of ~~a~~ particle size distribution; and

d16% represents a particle diameter corresponding to a point of 16% in ~~said~~ the cumulative curve of ~~a~~ particle size distribution.

2. (Currently Amended) An anti-dazzling film, comprising:

a transparent substrate film; and

an anti-dazzling layer provided on one side of the transparent substrate film;

wherein:

~~said~~ the anti-dazzling layer ~~comprising~~ comprises an ionizing radiation-curable resin and transparent fine particles~~,~~; and

~~said~~ the transparent fine particles ~~satisfying~~ satisfy ~~requirements represented by~~ formulae (III) and (IV):

$$3.5\ \mu m \leq d50\% \leq 5.0\ \mu m \qquad \text{(III)}$$

$$0.8\ \mu m \leq (d84\% - d16\%)/2 \leq 1.0\ \mu m \qquad \text{(IV)}$$

~~wherein~~ where:

d84% represents a particle diameter corresponding to a point of 84% in a cumulative curve of ~~a~~ particle size distribution of the transparent fine particles, assuming that the total weight of the transparent fine particles is 100%;

d50% represents a particle diameter corresponding to a point of 50% in ~~said~~ the cumulative curve of ~~a~~ particle size distribution; and

d16% represents a particle diameter corresponding to a point of 16% in ~~said~~ the cumulative curve of ~~a~~ particle size distribution.

3. (Cancelled)

4. (Previously Presented) The anti-dazzling film according to claim 1, wherein said ionizing radiation-curable resin comprises a polyfunctional acrylate monomer.
